

**Prophecy Lesson 8 - The Heavens declare the Glory of God (Psalm 19:1)**  
**December 22, 2020**

In this lesson I want to share God's heavenly version and timeline for the Nativity of Jesus as recorded in the stars. It happened only one time in recorded history and it will never happen again. The star clip you are about to observe, narrated by Larry Smith, reveals God's incredible glory in the heavens during the fifteen month period between the appearance of the 'heads up' Venus Jupiter conjunction on August 12, 3 BC and Herod's death on November 25, 2 BC, five months after Jesus' birth. The clip focuses on the three critical signs: the 'heads up' August 3 BC conjunction, the Jupiter Regulus triple conjunction and the Christmas Star conjunction on June 17, 2 BC, but it includes more that I want to bring to your attention before you view the clip.

1. The camera for this heavenly performance is located above the earth to eliminate its rotation. It remains fixed on Leo and Virgo in order to observe everything that happens in these two constellations during the 15 month period. The moon is our astronomical clock and you will see it will pass through the constellations fifteen times during the performance. The Sun passes through Leo twice, first in August 3 BC before Venus, the morning star, 20 degrees behind the Sun, and Jupiter form the August 12, 3 BC conjunction, and again in August 2 BC, six weeks after Venus (the evening star, 45 degrees ahead of the sun) and Jupiter formed the Christmas Star on June 17<sup>th</sup>..
2. The backdrops for this heavenly performance are the constellations Leo and Virgo. Leo 'the Lion of the tribe of Judah' (Gen 49:10) is center stage, supported by Virgo 'the virgin'. Virgo's role (Rev 12:1-2), which was referred to in the last lesson, is critical to the heavenly version of the Nativity story. After Venus joined Jupiter for the 12 Aug 3 BC conjunction, the planet proceeded into Virgo, accompanied by Mercury, and then joined the Sun to create the 'sign of Revelation 12', marking Mary's conception and the incarnation of Jesus on or about September 11, 3 BC. You will see the Sun pass through Virgo's womb on September 11<sup>th</sup>, followed shortly by Venus as Jupiter and Regulus nearly simultaneously form the first leg of their triple conjunction on September 14<sup>th</sup>.
3. Incredibly, during this fifteen month period, 14 conjunctions between the planets and/or Regulus take place that can be seen on the video clip. They include three of the four Venus Jupiter conjunctions in the 3-1BC conjunction Quartet described in lesson 3. After Venus and Jupiter form the Christmas Star, you will see Venus make what appears from Earth to be a four month loop through Virgo and Leo as Venus loops around to form the third of the four Quartet conjunctions with Jupiter on October 25, 2 BC, a month before the death of Herod.

Enjoy God's heavenly version of the Christmas story on the link below. You may want to watch it several times to fully appreciate all that it reveals. Please feel free to share this star clip with family, friends and whomever. It is truly remarkable what God has done, just in the heavens, to let the world know that our Savior, Jesus Christ, was born to save the world from sin. The heavens declare the glory of God!
